

# Always-on network intelligence. Zero guesswork.

Gain continuous visibility into devices on your local networks and monitor critical systems with up/down alerts, so you never get blindsided by outages or unknowns.

## What It Delivers

### Device Status Monitoring

- Monitors near-time status of critical devices and systems.
- Quickly surfaces when a monitored device goes offline or comes back online.
- Enables proactive response to outages, improving service continuity.

### Operational Efficiency & Service Continuity

- Eliminates the need for manual network checks
- Keeps teams informed without waiting on client reports
- Supports faster issue resolution and improved service reliability

“

With Liongard's powerful change detection, we stay ahead of every system modification automatically, accurately, and in real time. It saves us hours each month by eliminating the need for manual tracking and giving us full visibility at a glance.

**Simon Jani**

## Why It Matters

### Boosts service reliability

Ensure uninterrupted visibility into device status across networks.

### Stay ahead of outages

Instantly know when critical devices go offline to minimize downtime.

### Accelerates troubleshooting

Detect outages and act immediately without waiting on client reports.

### Improves operational efficiency

Reduces manual network audits and keeps inventories current.

## About Liongard

Liongard is redefining Attack Surface Management with an intelligent, AI-powered platform built for modern IT and security operations. Trusted by MSPs, MSSPs, and IT providers to protect over 70,000 end customers, Liongard delivers unified visibility across users, systems, networks, and cloud environments. With over 85 integrations, Liongard empowers teams to uncover hidden risks, enforce cybersecurity posture, and automate the actions that matter most. By combining deep asset intelligence with real-time insight and scalable remediation, Liongard fuels cyber resilience, operational efficiency, and sustainable growth.

## Ideal Use Cases

### Helpdesk & NOC Monitoring

Be alerted when mission-critical infrastructure drops offline.

### Client Infrastructure Visibility

Gain confidence knowing exactly what's online across networks.

### Proof of Performance for QBRs

Use device uptime data to demonstrate network reliability and proactive issue resolution during client business reviews.

### Proactive Incident Response

Resolve network issues before they impact users.

## Smart Insight, Continuously Delivered.

NetworkIQ transforms your static network snapshot into a live intelligence feed, empowering your team to respond faster, troubleshoot better, and secure more.
